

Dusty Miller or *Jacobaea Maritima*

Grows to about 12 inches tall and 12 inches wide

Colors: Silver Dust, Cirrus

May need midsummer trim if the plant becomes leggy, dusty miller flower may be removed to keep plant compact.

9-12" planting space

3

Dusty Miller prefers full sun, will grow in partial shade, but the silver look will be less intense there.

Water regularly right after planting. Needs well drained soil after roots have developed.

Mulch is a good surrounding for dusty millers, as it adds nutrients to the soil as it decomposes.

Other sun lovers pair nicely with Dusty Millers, such as zinnias, pentas, or salvia.
